5. Log No. Summary

This chapter summarises all software issues that have been addressed by this fix.

For issues raised by customers, Bentley Technical Support Group (TSG) Ticket Numbers are cross referenced where applicable.

POD TITLE	POD SERIES	ISSUE
Application Review	APP REJ	Items do not move to the appropriate status when changed to Approved or to Rejected
Application Review		The map image is not displayed in the Awaiting Review stack for Ordered Maintenance Works Orders i.e. a square with a red cross is displayed
EOT-REQUEST	Initial Repeat	Works Orders are still displaying on the EOT Request POD once the EOT Status has been updated to Approved, Rejected or Conditional within the LoHAC Production environment
Work Order Due to be Completed	LUMP SUM	Awaiting New CSL Comments or to mark complete
Work Order Due to be Completed	NON LUMP SUM	Awaiting New CSL Comments
Work Order Due to be Completed	NON DEFECT	Awaiting New CSL Comments
Rejected Work Orders	TOR	The Column does not take Task Order Status into account
Held Work Orders	TOR	The Column does not take Task Order Status into account
Updated EOTs	TOR	The Column does not take Task Order Status into account
Works Order to Instruct	ALL	Within the Works Order to Instruct POD there are some works orders (which do have a works order line and a budget and the Task Order Status is null) appearing within the Task Order Status stack. These works orders should be displayed in the appropriate stack based upon their priority i.e. 2M etc. – only works orders without lines and budgets and where the task order status field is populated should be displayed in the Task Order Request stack.

CONFIDENTIALITY STATEMENT

Works Order - Draft Status	ALL	<p>As we understand it the logic for the Task Order Request stack in the Works Order - Draft Status POD is:</p> <p>If the works order does not have a line and a budget and the Task Order Status (flexible attribute) field is populated with a value then it appears in the Task Order Request stack. As soon as it does have a line and a budget then it moves to the Non Lump Sum stack.</p> <p>TfL would like this logic changed so that if a Works Order does have a line and a budget and the Task Order Status (flexible attribute) field is set to PROD (Quote Produced) or DRAFT (Draft Quote) it should remain in the Task Order Request stack.</p>
Works Order - Draft Status	ALL	If a works order has a Permanent and a Temporary Repair where one of these are instructed and the other draft then the works order will not appear on the Works Order - Draft Status POD
Work Orders - Draft Status	TOR	The Column does not take Task Order Status into account
Works Order - Draft Status POD		The display of the Works Order - Draft Status POD has changed so that the stacks are not stacked
Application Status		If I click on any stacks within this POD then the work tray says that there is no data to display even though records are displayed within the graph
Works Order to Instruct	ALL	Speed issue when loading POD
Works Order - Draft Status	ALL	Speed issue when loading POD
xtfl_wo_trg_pkg, xtfl_wol_state_pkg, xtfl_wsu_wol_status, XTFL_WO_COMP_DATE_U_TRG, XTFL_WO_INTERIM_U_TRG, xtfl_wo_ord_inst_u_trg,	Packages/triggers	Date functions changed to have correct Year.
