Understanding of the issue:

When WOR_CHAR_ATTRIB110 was changed via IM4 the audit table would always show that the record was updated by the highways user, identified by user id 1.

Confirming the issue:

After changing WOR_CHAR_ATTRIB110 using the application review pod with the lohac_northwest user the following query was ran:

```
select * from hig_audits
where
haud_table_name = 'WORK_ORDERS'
and haud_pk_id = 'NW1_HR/101'
and haud_attribute_name = 'WOR_CHAR_ATTRIB110'
order by 1 desc
```

It was noted that HAUD_HUS_USER_ID returned a value of 1

Resolution:

The trigger work_orders_aud2 was modified so that ever attribute recorded by this trigger is IM4 aware.

Note: Other attribute recording triggers were not modified.

Confirming the fix:

After changing the trigger the test confirming the issue was reran. This time User id 1750 was recorded.

Note: Other attributes were not retested, since the change to all of the items in this trigger was a simple search and replace.
